

SMiG The new generation Safety Management System

by Interactive Graphics

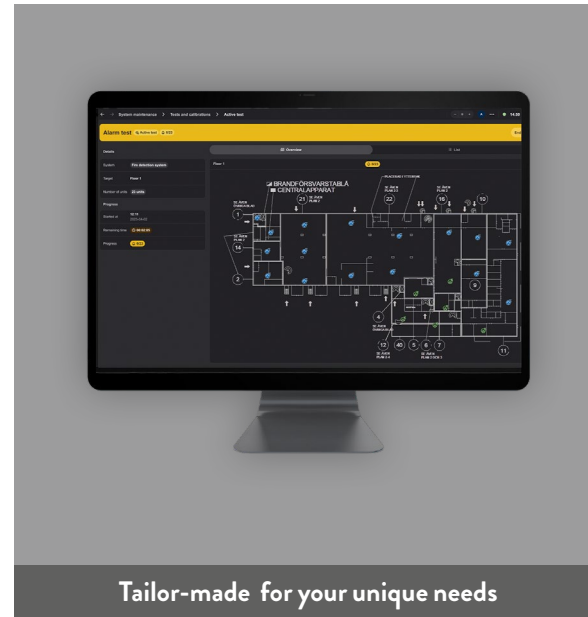

With interactive supervision and control, SMiG offers a clear overview of all safety systems, simplifying decision-making and maintenance through data-driven reports and seamless integration.

EARLY DETECTION

Experience the power of early detection with SMiG. Offering, on average, a critical 4-minute head start over fire detection systems – enabling faster evacuation decisions.

SAFETY MONITORING AND CONTROL

Interactive supervision and control of fire, gas detection, and other safety systems in your building, providing a centralized overview for intuitive decision-making during incidents.

REAL TIME EMERGENCY PROGRESS

Get a clear overview of gas leakage, understand fire spread with smoke and heat mapping, and track who is nearest to the incident in real time.

UPTIME

Enable data-driven analysis with reports, manage regulatory maintenance, and streamline testing and inspection. Lifetime predictions for consumables support long-term maintenance planning.

EARLY ACTION – THE ALARM BEFORE THE ALARM

Three minutes is the difference between a close call and a catastrophe. Early Action detects early signs of fire before the fire alarm does – giving you time to act, when every second counts.

Global support with local expertise

Consilium offers fast and accessible support no matter where you are in the world. Nothing beats local expertise in your language. With a global service network and a strong local presence, we ensure accessibility wherever you operate.

As much as we are proud of our success, our commitment is to ensure safety. We have pledged to protect the lives of mothers and fathers, sisters and brothers, colleagues and friends. Our work never ends. That is why we keep innovating.

Hospital

With over 100 years of expertise in the safety industry, we protect complex buildings with proven solutions, responsive support, and maximum system uptime. Explore the range of solutions we offer:

SMOKE, HEAT AND FLAME DETECTION
Our addressable smoke, heat, and flame detectors are strategically positioned throughout hospital facilities to identify signs of fire at an early stage. Reliable detection enables swift response and helps protect lives.

SAFETY MANAGEMENT SYSTEM (SMiG)
SMiG, our next-generation Safety Management System, offers a centralized overview of fire detection and other safety systems – helping operators see, understand, and act faster when every second counts.

VOICE EVACUATION SYSTEM (VES)
Voice Evacuation Systems (VES) deliver clear instructions during emergencies, helping people act quickly in emergency situations. With zone-specific messaging and seamless integration into existing fire alarms, VES improves evacuation efficiency.

LIVE OPERATION
Enables remote testing and verification of sensors and alarm levels, with the control panel accessible directly on your phone or computer. Real-time status confirmation and instant fault notifications help plan maintenance efficiently and reduce site visits.

EARLY ACTION
Provides early warnings that notify you of potential fire risk before an alarm is triggered. With real-time alerts via a mobile app, you can localize potential risks, prevent false alarms, and gain valuable time before a situation escalates.

SYSTEM INTEGRATION
Full integration with other safety systems such as sprinkler monitoring, panic alarms, access control, intrusion detection and CCTV ensures coordinated protection and a secure environment. Integration with nurse call systems, ventilation and other building systems is also supported, with alerts clearly presented on displays or information boards.

4 300+

Installed systems in buildings
