Early Action

The alarm before the alarm

Three minutes is the difference between a close call and a catastrophe. Early Action detects early signs of fire before the fire alarm does – giving you time to act, when every second counts.

EARLY DETECTION DRIVEN BY AI

Through connected systems and advanced sensors, Early Action constantly monitors your facility. When unusual patterns are detected, AI immediately flags it – giving you critical time to act before the fire alarm goes off.

USER FRIENDLY APP

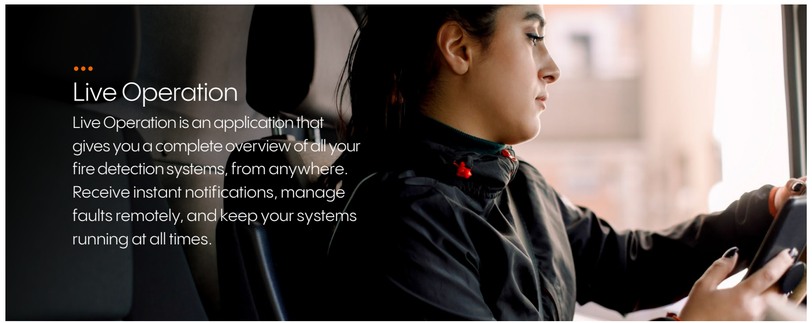

Through the Early Action app, instant alerts are delivered straight to your phone, giving you full control over your facilities and safety teams at all times. Delegate assignments, track incidents, and stay informed. Simple to set up and easy to use.

SEAMLESS INTEGRATION

Early Action integrates with your existing fire alarm system, enhancing it with AI-driven intelligence and real-time monitoring, up and running with minimal setup.

COST EFFECTIVE SAFETY

Fewer false alarms means fewer unnecessary and expensive fire brigade callouts, evacuations, and disruptions. The result – a measurable reduction in operational costs.

Live Operation

Live Operation is an application that gives you a complete overview of all your fire detection systems, from anywhere. Receive instant notifications, manage faults remotely, and keep your systems running at all times.

Global support with local expertise

Consilium offers fast and accessible support no matter where you are in the world. Nothing beats local expertise in your language. With a global service network and a strong local presence, we ensure accessibility wherever you operate.

As much as we are proud of our success, our commitment is to ensure safety. We have pledged to protect the lives of mothers and fathers, sisters and brothers, colleagues and friends. Our work never ends. That is why we keep innovating.

That's what Safety Tech is all about

BUILDING

Consilium

School

With over 100 years of expertise in the safety industry, we protect complex buildings with proven solutions, responsive support, and maximum system uptime. Explore the range of solutions we offer:

SMOKE, HEAT AND FLAME DETECTION

Our addressable smoke, heat, and flame detectors are strategically positioned throughout school facilities to identify signs of fire at an early stage. Reliable detection enables swift response and helps protect lives.

SAFETY MANAGEMENT SYSTEM (SMIG)

SMiG, our next-generation Safety Management System, offers a centralized overview of fire detection and other safety systems – helping operators see, understand, and act faster when every second counts.

VOICE EVACUATION SYSTEM (VES)

Voice Evacuation Systems (VES) deliver clear instructions during emergencies, helping people act quickly in emergency situations. With zone-specific messaging and seamless integration into existing fire alarms, VES improves evacuation efficiency. Beyond fire evacuation, VES can also serve as an active threat protection system, delivering lockdown instructions during violent incidents or other critical situations, guiding people to safety indoors or to specific locations.

LIVE OPERATION

Enables remote testing and verification of sensors and alarm levels, with the control panel accessible directly on your phone or computer. Real-time status confirmation and instant fault notifications help plan maintenance efficiently and reduce site visits.

EARLY ACTION

Provides early warnings that notify you of potential fire risk before an alarm is triggered. With real-time alerts via a mobile app, you can localize potential risks, prevent false alarms, and gain valuable time before a situation escalates.

SYSTEM INTEGRATION

Full integration with safety systems such as sprinkler monitoring, panic alarms, access control, intrusion detection and CCTV ensures coordinated protection across fire alarm, evacuation alarm and the central management system. Integration with ventilation and other building systems is supported, with alerts clearly presented on displays or information boards.
